Design leader with 12+ years across ad analytics and enterprise data platforms. Expertise in agentic AI experience design, data visualization, and design strategy for complex data environments. Founding designer of Intuit's data platform, where the time to find and use data fell from 45 days in 2021 to under 4 minutes in 2026.

work experience

Product Design Manager | Intuit | Aug 2024 - Jul 2026

Led UX strategy and a team of designers for Intuit's enterprise data platform: discovery, access, lineage, observability, data quality certification, instrumentation and pipeline authoring.

Team leadership

- Platform monthly users grew from 2,664 to 6,673 while I led the team, and time to discover data fell from 14.2 to 9.4 hours.
- With my team, built the tooling behind Intuit's clean-data standard; certified data grew from under 1% to 80% of Intuit's data, and critical data incidents at tax-season peak fell from 17 to 0.
- My team redesigned data access end to end: access to real-time data from 2-3 weeks to 3 days, access to encrypted data from 9 days to 3, and approvals for internal data from 24 hours to near-instant.
- My team designed column-level lineage that cut incident investigations from about 4 hours to minutes and was used to find the root cause of 19 marketing data incidents in one tax season.
- Built the team's shared research base and used it to get two features onto the roadmap, which my team then shipped: query insights (who uses a table and how) and data collections (a person's saved working set of data).
- Hired for the wider design team and secured promotions for all direct reports.

Direct IC execution

- Authored the interaction model for the platform's data-search agent and drove its adoption inside Cursor and Claude; answer precision reached 99%, and the time from a question to an answer fell from 45 minutes to 4.
- Designed a self-serve flow that cut the time to get data into the marketing platform from 1-2 weeks to under 24 hours.

Principal Product Designer | Intuit | Jan 2024 - Aug 2024

- After in-context user research and a cross-functional workshop that set the FY25 roadmap and the data collections strategy, designed the search rebuild with natural-language and semantic matching across tables and the Data Map (data organized by business concept rather than storage), launched March 2025; first-result precision rose from 81.31% to 89.24%.

Senior Product Designer | Intuit | Jun 2021 - Jan 2024

- Founded Intuit's data catalog from scratch to replace a commercial tool (search, browse, trust flags, documentation, ownership), then added the Data Map, feature stores and Kafka topics; top-five search click-through rose from 68% to 96%.
- Scaled the catalog into the platform's front door: designed the data-movement request workflow, then reused it for access requests and for promoting data to certified quality tiers, with access requests starting from the table a person is viewing.
- Sole design lead for Data Copilot, Intuit's first AI data assistant, consolidating 16 hackathon prototypes into one product: 500+ monthly users, 2x faster SQL, presented by the CTO at Investor Day 2023.
- Built the first data lineage UI in 4 weeks; 450-500 monthly users in its first year.

Product Designer, first design hire | 605 LLC | Oct 2017 - Jun 2021

Led design for three TV-advertising analytics products from first concept to launch; promoted from Interaction Designer & Researcher.

- 605 Platform: redesigned self-serve reporting to compare five audiences in one report instead of one; cut chart render time from 3-4 minutes to 1-1.5 and brought $2M in additional booked revenue on a product with $20M+ in booked revenue, built on an accessible data-visualization design system I created.
- 605 Indxr: self-serve audience targeting that replaced manual program rankings from research teams, which took 1 day to 2 weeks. 605 Impact: the first product measuring whether TV ads changed viewing, 32 reports collapsed into two pages.

Software Developer | TIBCO Software | Jul 2012 - Jun 2015

Java back-end developer on BusinessWorks, TIBCO's enterprise integration platform; defined the MVP for its Expresso mobile product.

education

April 2017

University of Michigan - Ann Arbor

MS in Information - Human Computer Interaction

May 2012

University of Pune

Bachelor of Engineering - Computer Engineering
